

## Ultraviolet (UV)

## Circular polarising (CPL)

## ND variable filter (ND)

**Ultraviolet(UV):** Ultraviolet filter protects your camera lens from scratches, dust, dirt, moisture and fingerprints while reducing unwanted ultra-violet light

**Circular polarising (CPL):** Circular polarising filter let you achieve vibrant colour saturation or eliminate glare and reflections from non-metallic objects and glass surfaces and minimise haze. This filter can be rotate when adjusting your lens to determine the amount of reflection to be remove.

**ND Variable (ND2-400):** This ND filter can be adjusted from ND2 to ND 400. One filter can instead of several filters. Brings more photographic pleasure for the general photographic amateur.

## SNAP-ON LENS CAPS

With Divipower Lens cap, you will never ever lose it anymore, because it comes with a lens cap safety loop to prevent the lens cap dropping and/or misplacing it when using the cameras. Furthermore, the safety clip keeps the lens cap tighten to the camera lenses even with a filter attached.
